

*What does it mean to really
understand in Maths?*

I can...

- **Describe it in my own words**
- **Represent it in a variety of ways
(pictures, language, symbols, contexts)**
- **Explain why the maths works**
- **Explain it to someone else**
- **Notice patterns and test them out**
- **Make up my own examples**
- **See connections between it and other
facts and ideas**
- **Identify in someone else's work when the
understanding has been used correctly
and where there are problems**
- **Recognise it in new situations and
contexts**
- **Make use of it in various ways and in new
and unfamiliar situations**
